I guess so...

I wouldn't buy one personally, since it has nothing that I must have.

Its just the N64DD = N64 Disk Drive.

An ultra rare add-on for the 360 released in Japan in very small numbers. >1000 if i recal. It was made by a company called radnet and could connect to the internet and download special games that were only ever released via the N64DD download service.

360? ;)

Yeah, it really is worth that much and it first showcased later games like Doshin The Giant and Animal Crossing if memory serves.

Good thing Doshin The Giant was an awesome game.

Dammit. I must have had 360 on the brain.

Yes your right Doshin No Giant was released on the DD which is a great game. It also had MArio Artist among other games.
